

Palletizing – PWO-600L Bag Palletizer – ‘little bag layer machine’

PWO-600L bag palletizer is one of the latest appliance in the series of palletizers produced by Drewmax company. The construction of this machine was created in 2014. This compact appliance may be of use in all places where there is no room for bigger palletizers and the required capacity does not exceed **600 batches** per hour, as this is the capacity of the presented palletizer.

Mobility is the basic advantage of this model. It means that the appliance is delivered as an independent palletizing device and may be placed next to any packaging line. PWO-600L bag palletizer is adapted

to ‘plug&play’ work – the machine delivered by our company can start palletizing on the very same day – we avoid costly assemblies and long-time commissioning of the appliance.

Basic technical parameters:

- Number of pallets in the accessory storage (option) – 16 pieces
- Maximum bag weight – 25kg
- Capacity: about 600 bags/hour
- 10 sets of packaging laying
- Installed power: 4kW
- Supply voltage: 3x400V; 50Hz
- Air supply: 6-10bar
- Air consumption: 200NI/min
